Detailed Action

Applicants' amendments and arguments filed on 03/02/09 have been fully considered and are deemed to be persuasive to overcome the rejections previously applied. Said amendment, amended claims 9 and 19 and cancelled claims 1-8 and 23. Thus, claims 9-22 and 24-30 are pending in this application, claims 10-18, 20-22 and 24-30 remain withdrawn as they are drawn to non-elected inventions, claims 9 and 19 are under consideration for examination.

Rejections and/or objections not reiterated from previous office action are hereby withdrawn.

Examiner's Amendment

An Examiner's amendment to the record appears below. Should the changes and/or additions be unacceptable to applicant, an amendment may be filed as provided by 37 CFR 1.312. To ensure consideration of such an amendment, it must be submitted no later than the payment of the issue fee.

Authorization for this Examiner's amendment was given in a telephone interview with Bill Schulman on 04/06/09.

The application has been amended as follows:

Abstract

Replace the Abstract with the Abstract enclosed along with the instant action.

In the Claims

Cancel claims 10-18, 20-22 and 24-30

Claim 19: Line 2, delete "transforming the" and replace with "transforming a"

Line 4, delete "a host cell" and replace with "an isolated host cell"

Allowable Subject Matter

Claims 9 and 19 are allowed.

The following is an examiner's statement of reasons for allowance:

All elected claims, are limited to an isolated nucleic acid encoding a polypeptide of SEQ ID NO: 1 isolated from *Chalaropsis* species having N,O-Diacetylmuramidase activity. The closest prior art is the disclosure by Felch et al., (J. Biol. Chem., 1975, Vol. 250 (10): 3713-3720, in IDS), said disclosure has reported purification and the complete amino acid sequence of N,O-Diacetylmuramidase from *Chalaropsis* species having 94.2% sequence homology to SEQ ID NO: 1. The amino acid sequence of *Chalaropsis* species N,O-Diacetylmuramidase disclosed by Felch et al., (J. Biol. Chem., 1975, Vol. 250 (10): 3713-3720, in IDS) contains sequencing errors and therefore a skilled artisan would not be able to utilize the amino acid sequence information of Felch et al., (*supra*) to isolate the correct encoding cDNA. Following a diligent search it was determined that the prior art neither teaches nor suggests an isolated nucleic acid encoding a polypeptide of SEQ ID NO: 1.

Any comments considered necessary by applicant must be submitted no later than the payment of issue fee and, to avoid processing delays, should preferably accompany the issue fee. Such submissions should be clearly labeled "Comments on Statement of Reasons for Allowance".

Any inquiry concerning this communication or earlier communications from the examiner should be directed to Ganapathirama Raghu whose telephone number is 571-272-4533. Abstract

A Chalaropsis lysozyme (Lysozyme Ch) is provided which has a corrected amino acid sequence and which can be utilized to prepare recombinant proteins having higher activity than those proteins using the incorrect sequence. Methods are also provided to reduce immunogenicity or increase half-life of the lysozyme. The lysozyme Ch of the present invention will be extremely useful in killing bacteria, particularly resistance strains such as MRSA and VISA, and the enzyme can be utilized in a variety of settings wherein bacterial infection has been a particular problem such as the hospital setting or in veterinary applications, and can also be used as an effective means of combating bioterror agents.
